EEB C234 Final Project: the Distribution of Neotrygon kuhlii in Asia

Onny N. Marwayana

Abstract

Here we would like to make an abstract regarding my final project of EEB C234 class.

1 Introduction

I would like to explain about:the species of Neotrygon kuhlii, the distribution, and the habitat.

2 Materials & Methods

I would like to explain: How I got the data and where the data come from and What kind of data manipulation that I would like to do for this project.

3 Discussion

I would like to discuss how the distribution of NK in Asia is like and why it happens.

4 Acknowledgement

Give an acknowledgement for some researcher who take part on this research.

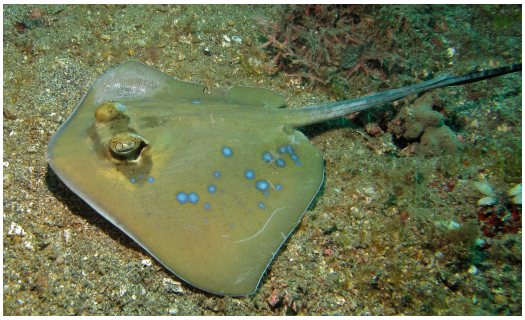

Figure 1: Here's a caption!

5 Reference

The Hardy-Weinberg equilibrium model constitutes the null model of population genetics. It characterizes the distributions of genotype frequencies in populations that are not evolving ([2, 1, **?**]).

Refers to the references.

6 Formatting text and Writing an equation

Here is a bolded sentence
Here is an italicized sentence
Here is a sentence that is bolded and italicized
HERE IS A SENTENCE IN SMALL CAPS

Here's a pair of equations from coexistence theory:
$\frac{dN_1}{dt} = r_1 N_1(1 - \alpha_{11} N_1 - \alpha_{12} N_2)$ $\frac{dN_2}{dt} = r_2 N_2(1 - \alpha_{22} N_2 - \alpha_{21} N_1)$
